

Routine Reminder Mockup

Main Dashboard

Purpose: The user views their current streak, tracks daily progress, and manages their pending routines.

Actions: Tapping a task checkbox marks it complete and recalculates the progress bar. Tapping the "ADD TASK" button opens the Task Configuration Modal. Reaching 100% progress automatically navigates to the Success Screen.

Task Configuration Modal

Purpose: The user creates a new task or edits an existing one by setting its name, scheduled time, and weekly recurrence.

Actions: Tapping the text or time fields opens the input keyboard or clock picker. Tapping the weekday circles (S, M, T...) toggles the active days. Tapping "SAVE TASK" updates the list and returns the user to the Main Dashboard.

Success Screen

Purpose: The user receives visual confirmation and a streak update for completing all of their daily tasks.

Actions: Tapping the "RETURN TO DASHBOARD" button closes this screen and navigates the user back to the Main Dashboard.

What changed and Why

Screen or element	The wireframe assumed	The mockup shows	What I will change
Main Dashboard: Task List	Tasks were split into two distinct sections for "PENDING TASKS" and "COMPLETED TASKS".	A single consolidated "TASKS" section is used, with times (e.g., "09:00 AM") added to each row.	I will update the layout to use a single ListView.builder for all tasks, relying on the checkbox state rather than moving items to a different section.
Main Dashboard: Header & Icons	The top bar included a hamburger menu icon, and a generic placeholder box sat next to the streak.	The hamburger menu was removed entirely, and a custom flame icon was introduced to represent the streak.	I will drop any plans for a side navigation drawer and import the flame asset to display next to the streak text.
Success Screen: Visuals	"CONGRATULATIONS!" was standard text, with a giant square image placeholder in the center.	"CONGRATULATIONS!" is inside a styled badge, featuring a party popper graphic and an additional flame icon.	I will use a styled Container for the badge and ensure the party popper and flame assets are correctly sized and positioned in the Flutter layout.
Main Dashboard: Progress Bar	A static, full-width linear progress bar.	An animated progress bar that dynamically fills to 100% over time to visually reward the user.	I will implement an animated LinearProgressIndicator or use a TweenAnimationBuilder in Flutter to smoothly animate the progress bar filling up as tasks are completed.
